Tikka T3x TAC A1 is a special development for law enforcement sniper application. The rifle is based on Tikka’s famous Tikka T3 bolt action construction but made to meet the challenging requirements of long range tactical shooting. The Tikka TAC A1 provides straight-forward performance and ruggedness with just the right amount of adjustability and absolute precision, all in a light weight and compact package.

The aluminum chassis stock system is ambidextrous and offers a foldable rear stock with quick adjustable cheek piece and adjustable length of pull. Picatinny rail on the receiver provides a solid platform for day scope mounting and an AR-type fore-end for NVD, LAD and other accessories. The muzzle is threaded for attaching muzzle brakes and other suppressors. Silky smooth bolt operation provides flawless feeding from the steel box magazines.

The aluminum chassis stock system is compatible with most common type AR-15 fore-ends, pistol grips and rear stocks, making the rifle fully modular to fulfill all operational requirements.

### Specifications
